Practitioner Diversion Awareness Conference

Training and Resources Antonio Guzman Associate Section Chief

LEGAL DISCLAIMER

The following presentation was accompanied by an oral presentation on November 4 & 5, 2019, and does not purport to establish legal standards that are not contained in statutes, regulations, or other competent law. Statements contained in this presentation that are not embodied in the law are not binding on DEA. Summaries of statutory and regulatory provisions that are summarized in this presentation do not purport to state the full extent of the statutory and regulatory requirements of the cited statutes and regulations. I have no financial relationships to disclose.

Fair Use Act Disclaimer

This presentation is for educational purposes only. This presentation may not be further copied or used, with the embedded images and videos, without an independent analysis of the application of the Fair Use doctrine.

Fair Use

Under section 107 of the Copyright Act of 1976, allowance is made for "Fair Use" for purposes such as criticism, comment, news reporting, teaching, scholarship, education and research.

Fair Use is a use permitted by the copyright statute that might otherwise be infringing. Any potentially copyrighted material used in this presentation has been reviewed and found to be used in a manner consistent with Fair Use. A completed Fair Use checklist is attached.

U.S. Drug Enforcement Administration Diversion Control Division

Course Objectives

 Introduce practitioners to key federal resources involving controlled substances.

- Inform practitioners on key state resources involving controlled substances.

Course Objectives

 Provide practitioners with information on how to assist patients and their family members with overcoming controlled substance addiction.

Course Objectives

Provide practitioners with information concerning resources specific to their communities.

 Provide resources for practitioners related to the prescribing and dispensing of controlled substances.

Questions to Discuss

At the completion of this block of instruction you will be able to answer the following questions:

1. Which website can you access in order to obtain information about DEA laws and regulations?

2. Does the DEA provide a guidance manual for practitioners on the DEA website?

Questions to Discuss

- **3.** Which website provides a list of treatment centers for individuals seeking addiction treatment?
- 4. Which websites would you go to in order to locate a controlled substance collection site?
- 5. Who can submit a tip to the DEA online?

Fentanyl Safety Recommendations for First Responders

November 28, 2017

The abuse of drugs containing fentanyl is killing Americans. Misinformation and inconsistent recommendations regarding fentanyl have resulted in confusion in the first responder community. This document provides scientific, evidence-based recommendations to protect first responders from exposure.

About the Program

The DEA and Discovery Education have joined forces to combat a growing epidemic of prescription opioid misuse and heroin use nationwide. Operation Prevention's mission is to educate students about the true impacts of opioids and kick-start lifesaving conversations in the home and classroom.

Since its launch, Operation Prevention has reached over 4M students nationwide. No local sponsorship or corporate funding is necessary for you to get started today.

DEA and Discovery Education are grateful to the National Institute on Drug Abuse (NIDA) and the Substance and Abuse and Mental Health Services Administration's (SAMHSA) Center for Substance Abuse Prevention for their contributions to the development of Operation Prevention.

Community Resources

Teachers – Operation Prevention

www.operationprevention.com

The Operation Prevention site provides:

- Virtual classrooms
- Virtual field trips
- Parent tool kit
- Video challenges
- Student learning modules

Elementary, middle, and high school classroomready lessons and companion guides provide educators with standards-aligned tools to integrate seamlessly into classroom instruction.

Parents can join the conversation with a family discussion guide which provides information on the warning signs of opioid misuse and a guide to prevention and intervention to empower families to take action. Now includes talking points for parents of elementary students. Available in English and Spanish.

Operation Prevention offers expanding Spanish resources, including a Spanish website, student learning module and translated parent tookit to aid families with their discussions about opioid misuse

This contest encourages students to send a message to their peers about the dangers of prescription opoid misuse by creating a 30-60 second original Public Service Announcement to win up to \$10,000. The 2018 Video Challenge will launch November 2017.

Take students on a virtual journey, where leading experts provide the unfiltered facts on drugs and addiction. A companion activity helps start discussions in the classroom.

Student Learning Module

In this self-paced, standards-aligned e-learning experience, explore the science of opioid misuse through the powerful stories of teens. With strategies and resources for those being faced with a decision about, precedition, policid malues, students hacrose

selection, dosage, duration, follow-up, and discontinuation; and 3) assessing risk and addressing harms of opioid use. CDC developed the guideline using the Grading of Recommendations Assessment, Development, and Evaluation (GRADE) framework, and recommendations are made on the basis of a systematic review of the scientific evidence while considering benefits and harms, values and preferences, and resource allocation. CDC obtained input from experts, stakeholders, the public, peer reviewers, and a federally chartered advisory committee. It is important that patients receive appropriate pain treatment with careful consideration of the benefits and risks of treatment options. This guideline is intended to improve communication between clinicians and patients about the risks and benefits of opioid therapy for chronic pain, improve the safety and effectiveness of pain treatment, and reduce the risks associated with long-term opioid therapy, including opioid use disorder, overdose, and death, CDC has provided a checklist for prescribing opioid for chronic pair (http://stacks.cdc.gov/vjew/cdc/38025) as well as a website (http://www.cdc.gov/dp/gov/endose/prescribingresources.htm)) with additional tools to guide clinicians in implementing the

Тор

Opioids are commonly prescribed for pain. An estimated 20% of patients presenting to physician offices with noncancer pain symptoms or pain-related diagnoses (including acute and chronic pain) receive an opioid prescription (1). In 2012, health care providers wrote 259 million prescriptions for opioid pain medication, enough for every adult in the United States to have a bottle of pills (2). Objoid prescriptions per capita increased 7.3% from 2007 to 2012, with objoid prescribing rates increasing more for family practice, general practice, and internal medicine compared with other specialties (3). Rates of opioid prescribing vary greatly across states in ways that cannot be explained by the underlying health status of the population, highlighting the lack of consensus among clinicians on how to use opioid pain medication (2)

issessment, and treatment of chronic pain are challenges for health providers and systems. Pain might go unrecognized, and patients, particularly members of racial and ethnic minority groups, women, the elderly, persons with cognitive impairment, and those with cancer and at the end of life, can be at risk for inadequate pain treatment (4). Patients can experience persistent pain that is not well controlled. There are clinical, psychological, and social consequences associated with chronic pain including limitations in complex activities, lost work productivity, reduced quality of life, and stigma, emphasizing the importance of appropriate and compassionate patient care (4). Patients should receive appropriate pain treatment based on a careful consideration of the benefits and risks of treatment options

Chronic pain has been variably defined but is defined within this guideline as pain that typically lasts >3 months or past the time of normal tissue healing (5). Chronic pain can be the result of an underlying medical disease or condition, injury, medical treatment, inflammation, or an unknown cause (4). Estimates of the prevalence of chronic pain vary, but it is clear that the number of persons experiencing chronic pain in the United States is substantial. The 1999-2002 National Health and Nutrition Examination Survey estimated that 14.6% of adults have curren
